

## UTM Sports Data Pipeline

The iOS app pulls and caches data from [raw.githubusercontent.com](https://raw.githubusercontent.com/OatsCG/UTM-Drop-Ins-Schedule). This data is updated daily by updateRemoteSchedule.py from a remote server.

updateRemoteSchedule.py scrapes the UTM schedule at [core.service.elfsight.com](https://core.service.elfsight.com), filters and cleans data, creates category tags, and pushes the files publicly. They can be accessed at: <https://github.com/OatsCG/UTM-Drop-Ins-Schedule>

Medals, notifications, and live timings are handled locally.
